Engineering progress measured on 3D model data rather than drawings

Wednesday, 20 June 2018 14:15 (15 minutes)

Current CAD/PLM technology is finally allowing to perform engineering progress evaluation based on the model data rather than on traditional drawings and human subjective estimation.

The paper illustrates the applied method, the requirements posed on the CAD/PLM solution to guarantee the applicability, a solution already available on the market and a real case study.
